

Secure Project Management

Securely managing projects in a central repository is absolutely essential for those that operate in a space where data security is paramount. WorldERP® provides a SAS70 Type II (SSAE 18) and HIPPA compliance, as well as a ISO/TR Bank level equivalent security architecture where data can be easily stored and accessed on a secure, controlled basis with audit tracking.

Our easy to use interface speeds adoption and allows you to configure ProjectPlanFX™ with as much, or little, automation and features as you desire.

ENABLING EFFECTIVE MGMT.

The ability to assign multiple labor resources to tasks and allow them to collaborate and document automatically ensures that project managers can maintain project plans that are efficient, concise, and properly managed.

When additional resource needs are identified, they can simply be allocated to the project quickly and easily. The project manager can quickly take action to add or request resources, confirm resource assignments, update resource details, and view labor and expense resources in a graphical dashboard format or within a list view.

Planning & Management Made Easy

Simple and Intuitive
Flexible and Configurable
Hyperconverged for Maximum Efficiency
Accelerated Development of Plans
Time & Trouble Ticketing

ProjectPlanFX™ Is Unlike Any Other Solution

EFFICIENT MANAGEMENT IS A COLLABORATIVE ACTIVITY

Team members are assigned work through the project. Any work added by the project team is highlighted to the project manager so it can be reviewed and, where appropriate, incorporated into the plan. This ensures work doesn't fall through the cracks and makes for a more accurate plan.

Social collaboration and project management are merged in ProjectPlanFX™, letting project participants interact in real-time through project-specific conversations, and collaboratively upload and review documents.

Embedding social capabilities within the business processes ensures secure and consistent communication across all project stakeholders.

The ability to assign multiple labor resources to tasks ensures that project managers can maintain project plans that are concise, and where additional resource needs are identified, they can simply be allocated to the project.

The project manager can quickly take action to add or request resources, confirm resource assignments, or update resource details, and view labor and expense resources in a graphical card format or in a list view.

HIGHLIGHTS

- Plan & manage all projects from simple to complex
- Plan & schedule work in interactive Gantt
- Assign work and incorporate additional work identified by team members
- Schedule using dependencies, leads and lags, and constraint dates
- Exceptions-based progress and thresholds
- Raise, record, and track project issues and changes
- Compare target and actual project progress across your projects
- Visibility into project labor resource capacity and planned utilization
- Real-time self-service reporting on project management information
- Compare current plan to baseline
- Search for or request resources
- Dynamic integration with all WorldERP solutions.
- API
