Simple and Intuitive

Flexible and Configurable

GIS & BIM Support

ArcGIS Support *(optional)*

Embedded Analytics

In the Cloud or On-Premise

WorldERP™ provides a Computerized Maintenance Management System (CMMS) that is comprehensive, affordable, and facilitates management of the full range of CMMS functions and responsibilities.

Our powerful and easy to use CMMS gives organizations the much needed tools to manage tangible assets from real estate to equipment to light fixtures with extensive and flexible features that makes our CMMS administration and use easier, more accurate, and more efficient than ever.

ENABLING EFFECTIVE MGMT.
The automation features of our CMMS takes the guesswork out of the history, maintenance schedules, and life expectancy of assets thereby dramatically improving efficiency and up-time.

Managers can more efficiently and effectively contribute to the management of other important tasks such as improving the performance of employees, helping employees meet organizational goals, and grow the business without constantly 'putting-out-fires'.

With an intuitive user interface and AI intelligence, World-CMMS™ provides your firm with the efficiencies it needs to minimize liabilities and maximize cost savings.

The Impact and Value of WorldCMMS™

WorldCMMS™ Enables Organizations to:

Manage Aging Infrastructures

- Identify equipment components and how they are connected to the asset assembly.

- Implement and enforce standard processes for asset management.

- Support real-time data collection, diagnostic and analysis tools to extend their usable life cycle.

- Improve overall maintenance best practices and meet increasingly complex health, safety and environmental requirements.

- Control operational risk by embedding risk management into everyday business processes.

- Respond to global price pressure by enabling a reduced workforce to work more efficiently and cost-effectively.

- Standardize asset management best practices across virtually all asset types across the entire enterprise.

- Enable asset-intensive organizations to optimize their maintenance and repair supply chain with management of spare parts inventory that is fully integrated into World-CMMS™.

Embedded, Actionable Intelligence

WorldCMMS™ offers the required visibility, control and automation of key information that an organization needs to achieve greater efficiency in asset management, and manages virtually all asset types, from traditional physical assets to emerging smart assets.

Highlights

- Collect, consolidate and analyze essential information on virtually all types of assets.

- Turn insights into action by analyzing historical data alongside environmental conditions.

- Improve operations through better asset availability, reliability and use.

- Extend asset value through condition-based maintenance.

- Extend the useful life of assets or equipment, improve return on investment and defer new purchases.

- Unify processes for wide-ranging asset management functions across multiple sites.
